

The easy button for connecting Agentforce Revenue Management and NetSuite.

APPEXCHANGE CERTIFIED · BUILT FOR NETSUITE CERTIFIED SUITEAPP · SOC 1 / SOC 2 CERTIFIED

Continuous Control

THE PROBLEM

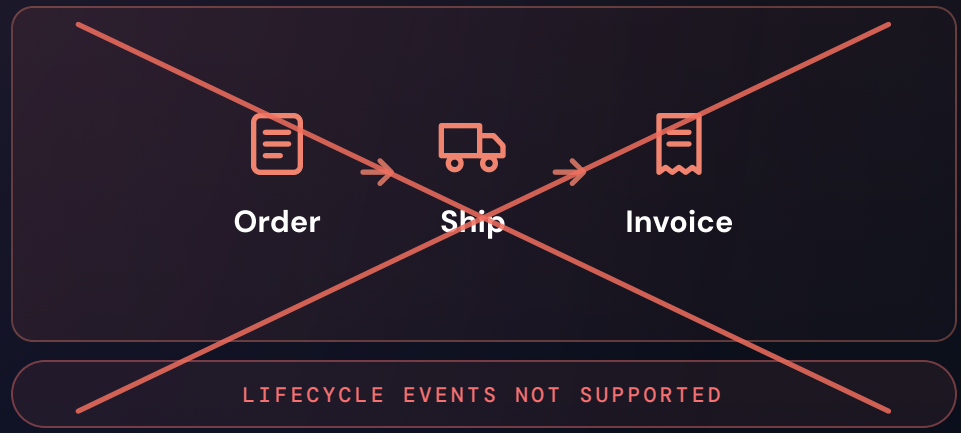

NetSuite wasn't built to handle lifecycle management.

How customers sell today.

- **Ramp deals**
  ANNUAL STEP-UPS
- **Subscription lifecycle**
  AMEND · RENEW · UPSELL · DOWNSELL
- **Usage-based models**
  METERED CONSUMPTION

Agentforce Revenue Management supports

Built for linear order and invoicing.

Old school ERP · 20+ years old

HOW IT GETS SOLVED TODAY

The messy middle: glue, code, and spreadsheets.

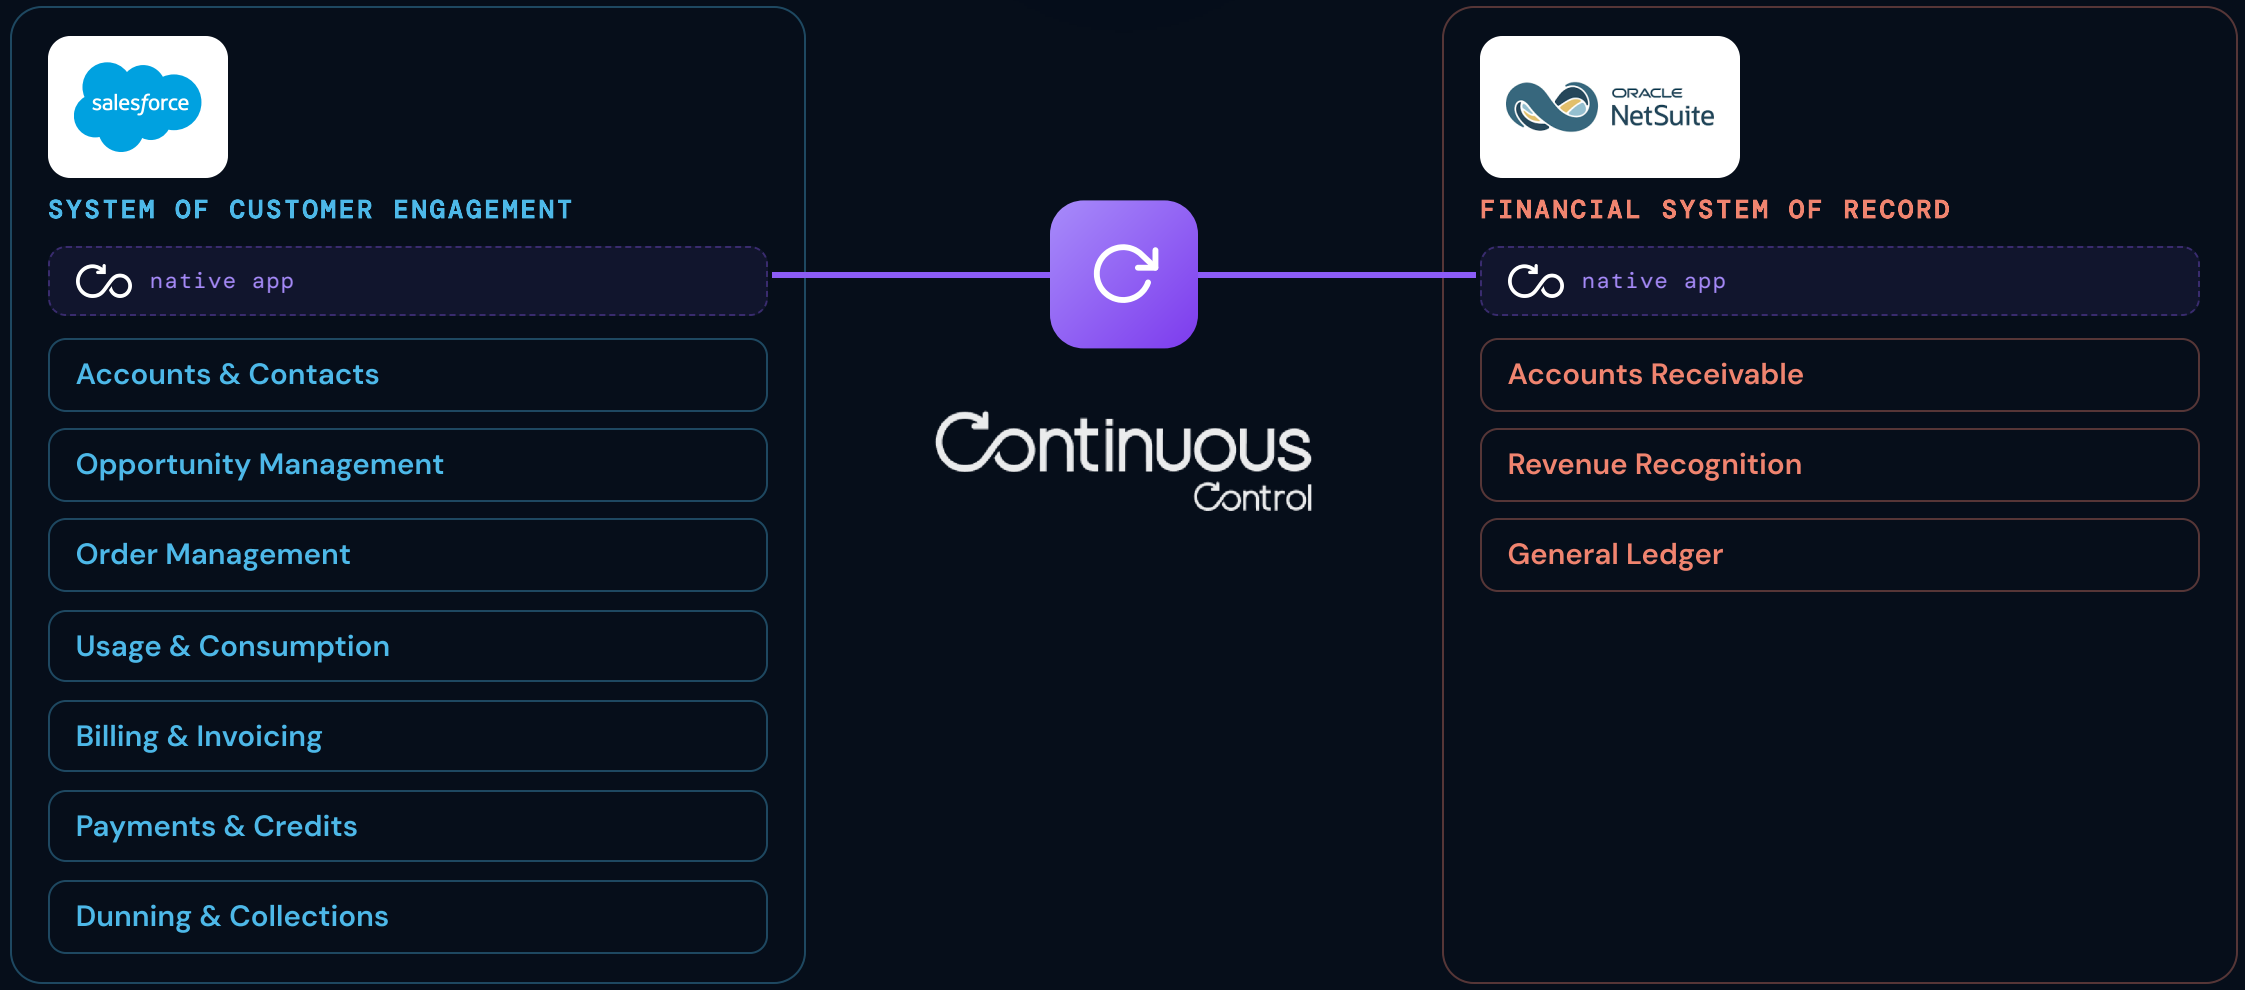

Missed revenue
Amendments and usage that never make it to billing.

A slow close
Weeks of reconciliation between two systems that disagree.

Audit pain
No lineage from the contract to the journal entry.

WHAT IT IS

The only purpose-built application, native in both systems.

APPEXCHANGE CERTIFIED · BUILT FOR NETSUITE CERTIFIED SUITEAPP · SOC 1 / SOC 2 CERTIFIED

HOW IT WORKS

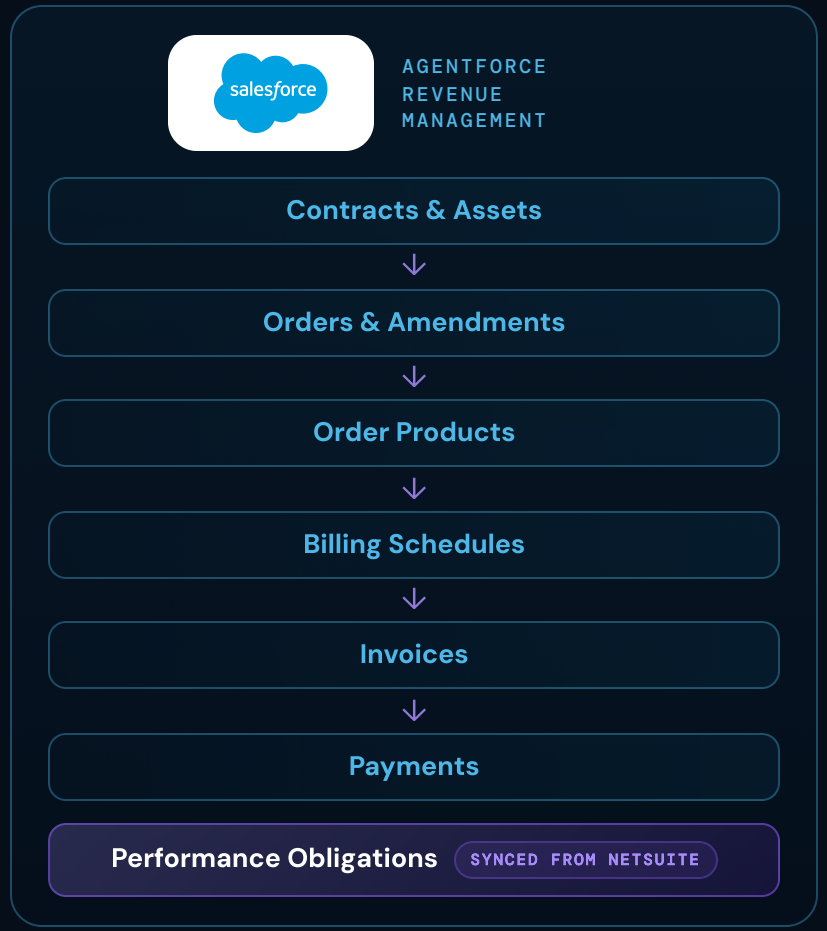

Every sync, prebuilt.

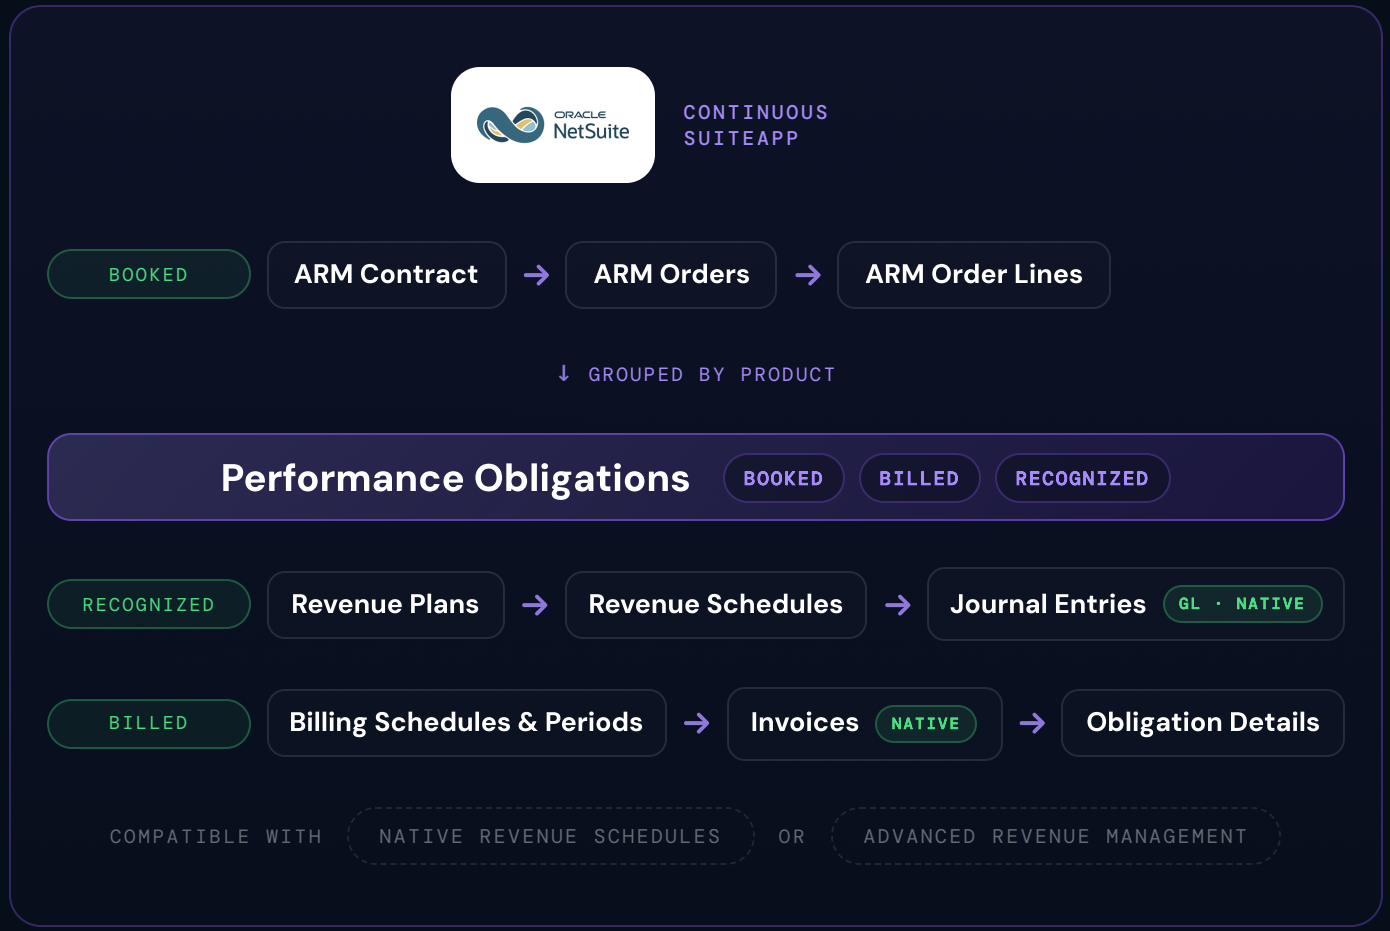

And easily modifiable: every field mapping stays editable in the Mapping Editor, no code required.

THE DATA MODEL

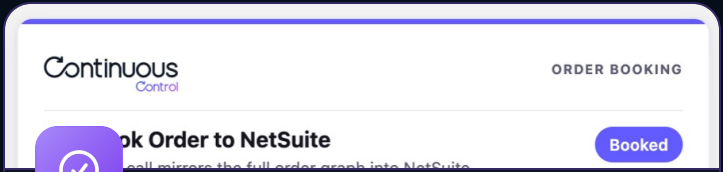

Under the hood: what lives where.

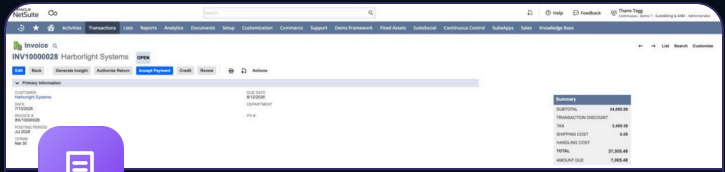

KEY FEATURES

Everything the easy button does.

Book in one click

The entire contract lands in NetSuite: orders, obligations, billing schedules.

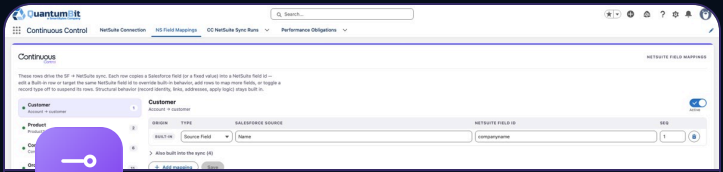

Native invoices & payments

Transactions post as real NetSuite records, straight to the General Ledger.

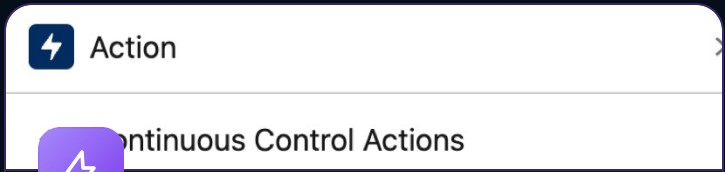

Revenue recognition

Booked, Billed, Recognized, the same numbers in both systems.

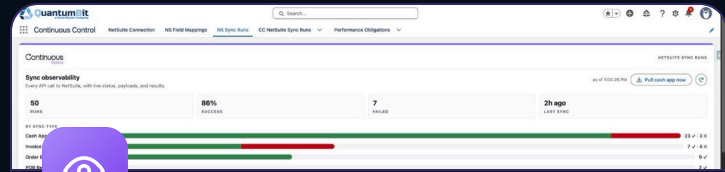

Prebuilt field mappings

Every sync ships mapped. Tune it in clicks, not code.

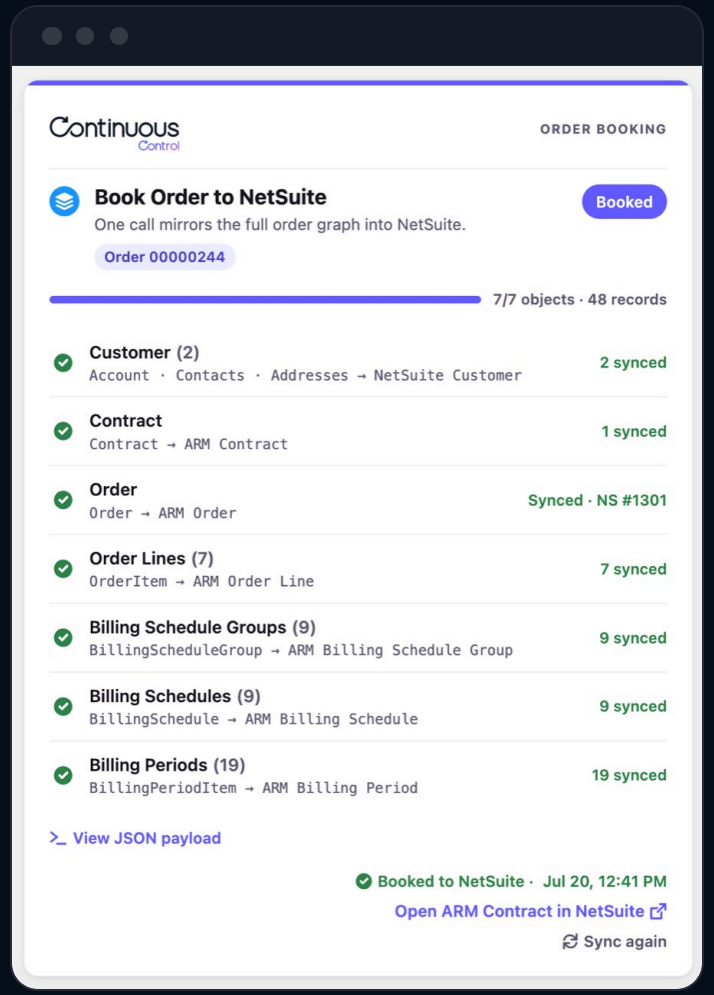

Flow actions

Branded actions drop the sync into any automation you build.

Full observability

Every run tracked, with deep links into both systems.

THE EASY BUTTON

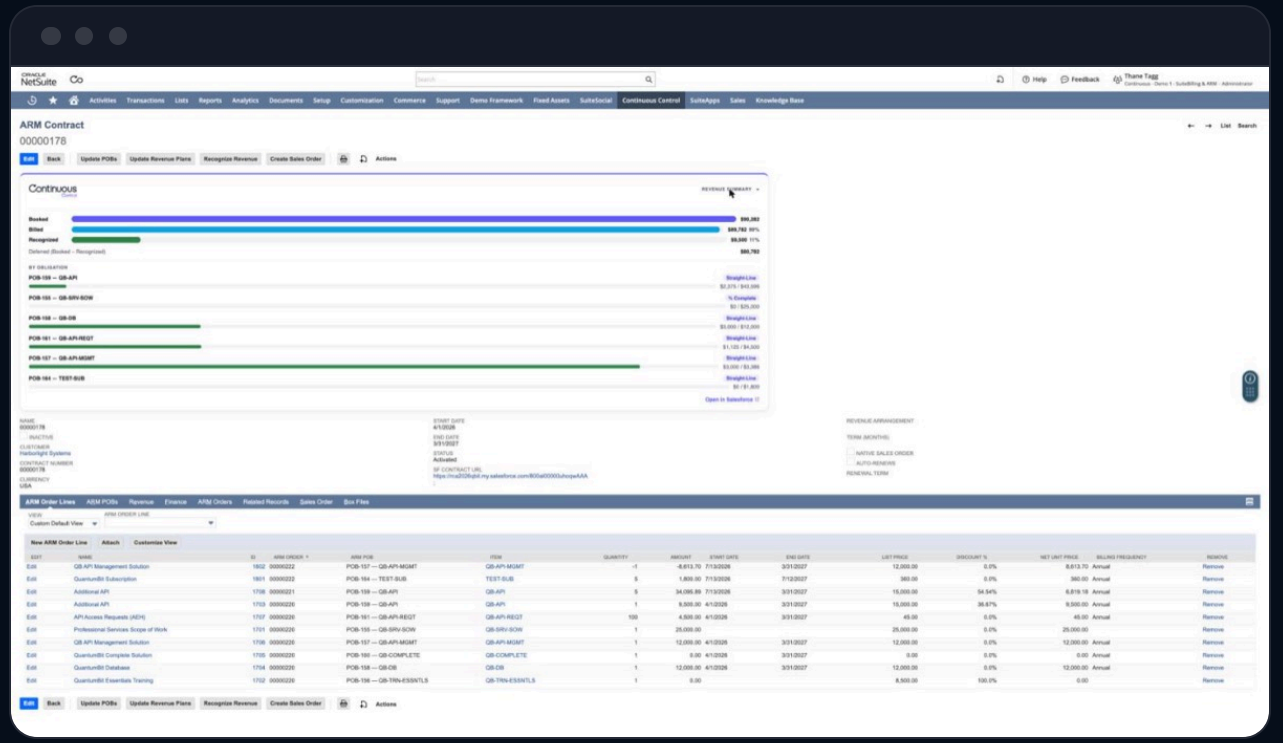

Book an order. That is it.

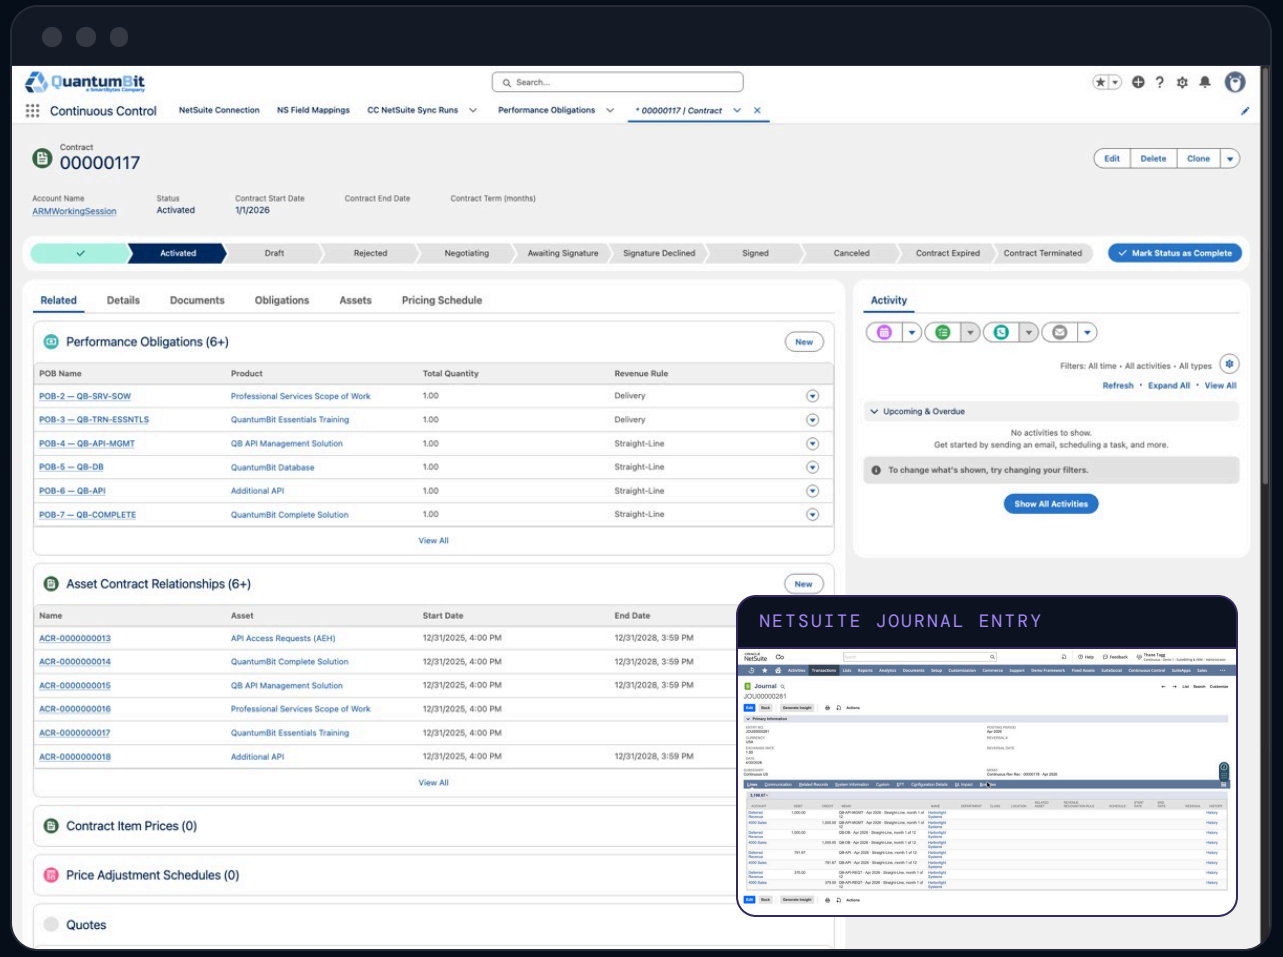

- **One click** builds the entire contract in NetSuite.
- Orders, performance obligations, and billing schedules land together.

INSIDE NETSUITE

A NetSuite side built for how you sell.

- ✓ Ramps, amendments, and usage carried **intact**.
- ✓ Contract, orders, obligations, and billing in **one view**.

REVENUE

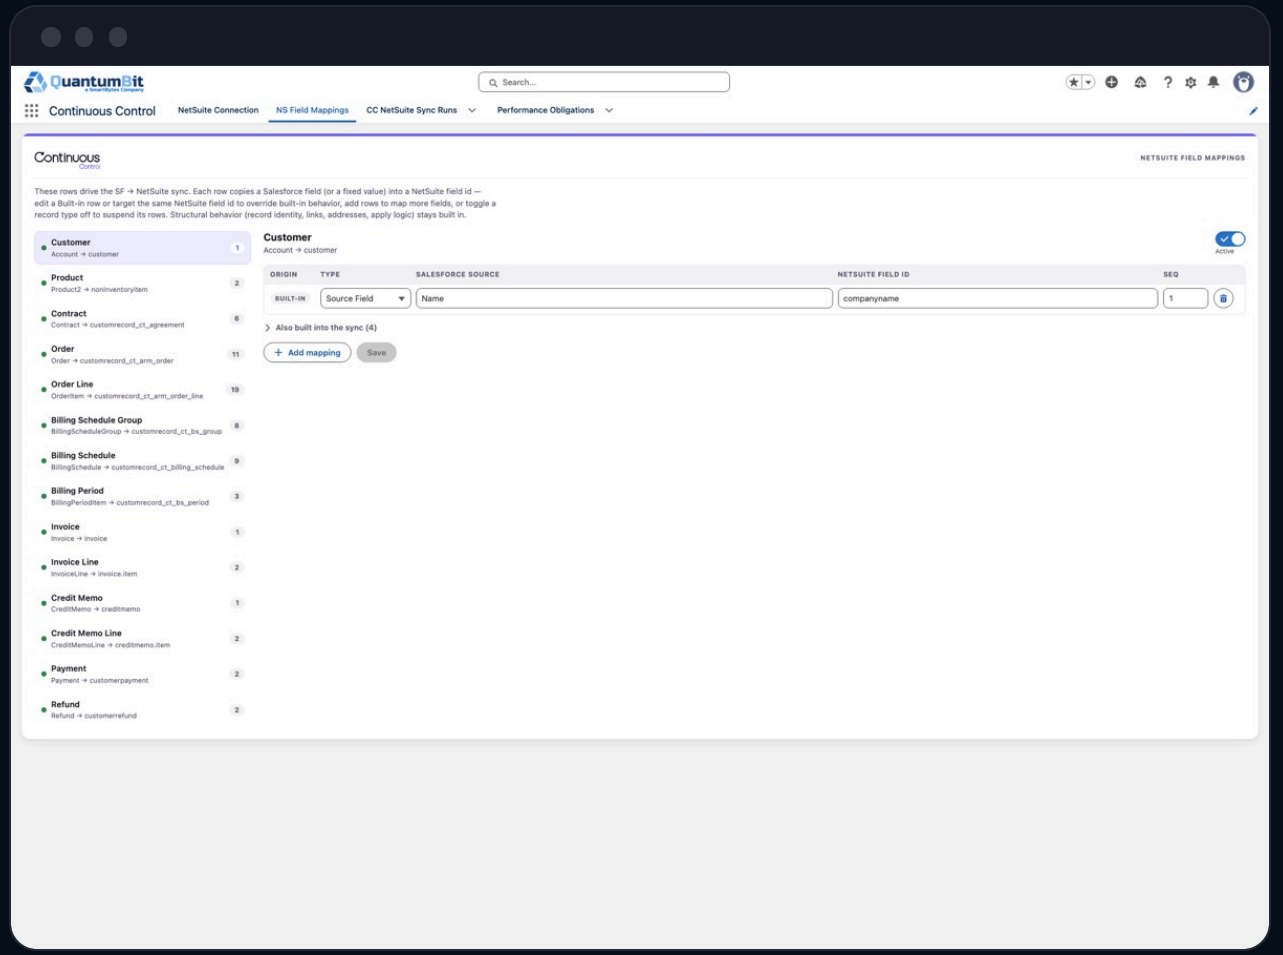

Booked. Billed. Recognized.

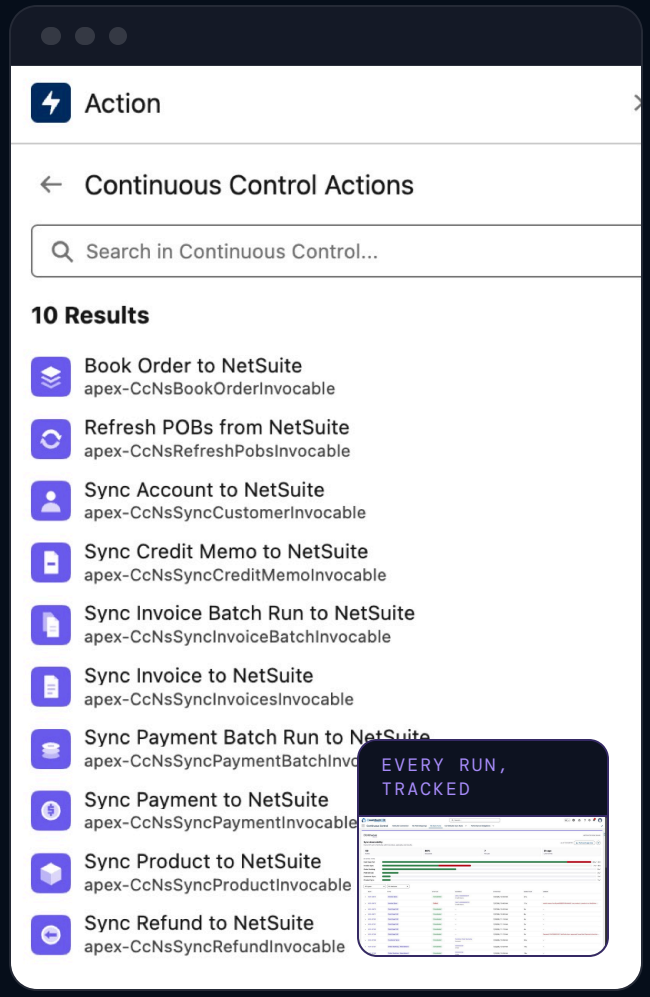

- Revenue posts to the General Ledger as **native journal entries**.
- The same numbers on the contract **in both systems**.

SETUP

Configured in clicks, not code.

- ✓ Prebuilt mappings **ship with the product**.
- ✓ Your admin owns it. **No middleware, no consultants.**

BUILT TO EXTEND

Drops into anything you build.

- **Native Flow actions** for every sync.
- **Full observability** on every run.

WHAT CHANGES

The messy middle, gone.

Revenue captured

Every amendment and usage charge makes it to billing.

A faster close

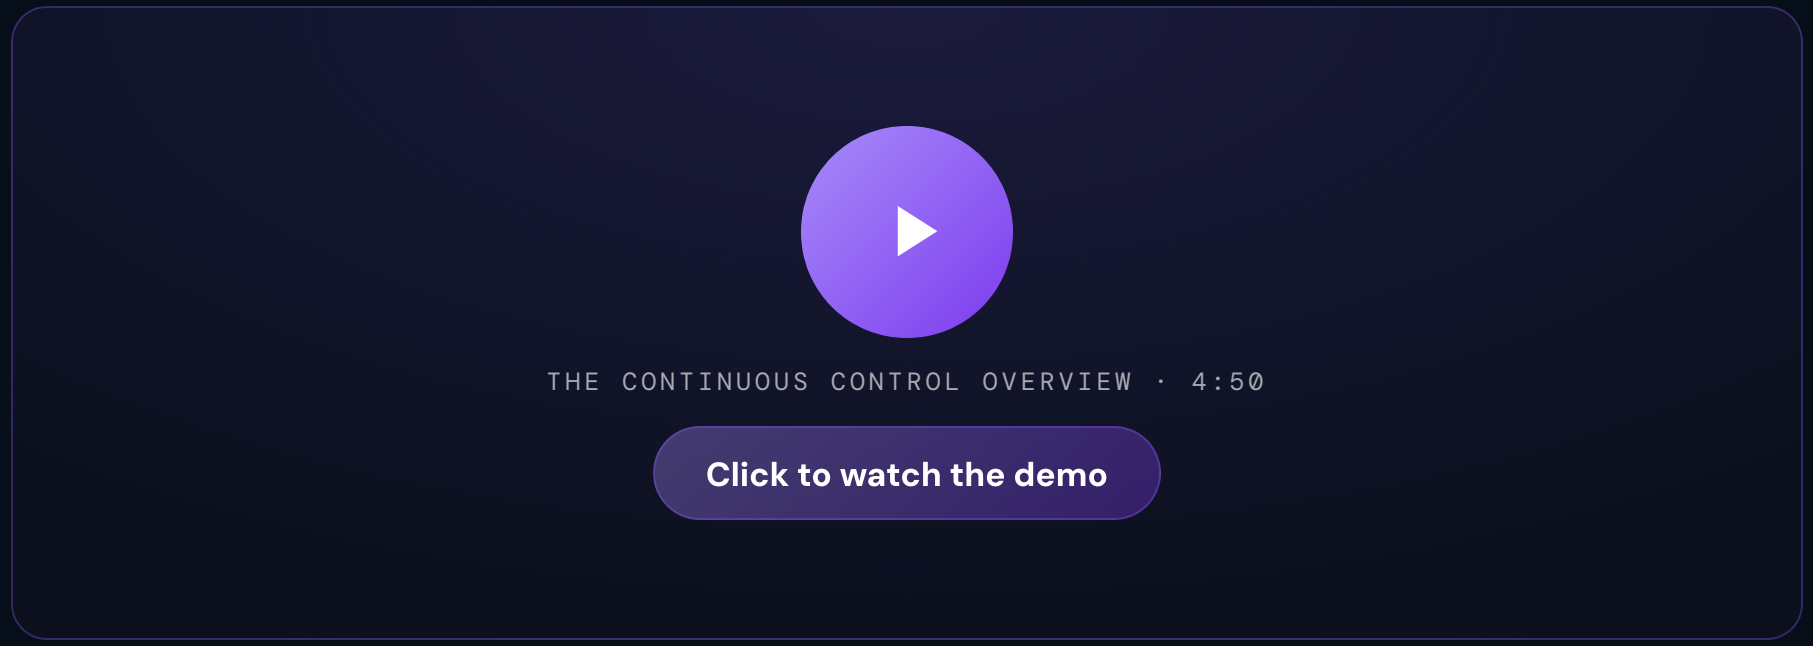

The books tie out. Both systems agree on every number.

Audit-ready

One click of lineage from the contract to the journal entry.

SEE IT RUN

The whole flow, in five minutes.
